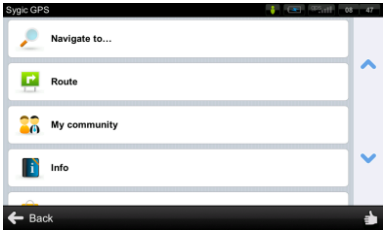
I. Getting Started

Run your Sygic application. You should use your device outdoors to make sure you have good GPS reception and device can precisely determine your location (tunnels, large objects such as tall buildings, trees, electric cables can sometimes interfere with reception).

For safety reasons, always plan a route before you start driving.

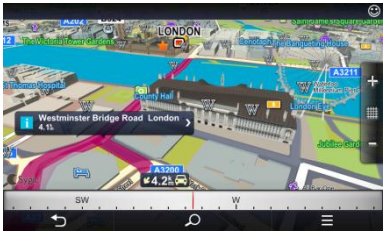
To select destinations, review information about your route and alter settings, go to the Menu (A).In the Navigation Mode (B), the software tracks your position for visual reference of route and map around you. If you want to explore other locations, drag the map with your fingers to switch to the Map Browsing Mode (C).

A



B

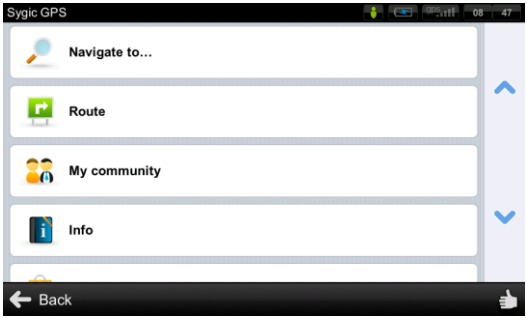
C



Menu

Enter the Menu by tapping the list icon on the right side of the information bar. You can scroll between the menu pages using the scroll bar on the right side on Personal Navigation Devices (PNDs) and InDashes.

If you want to return to the previous screen, tap the Back button.



Map browsing mode

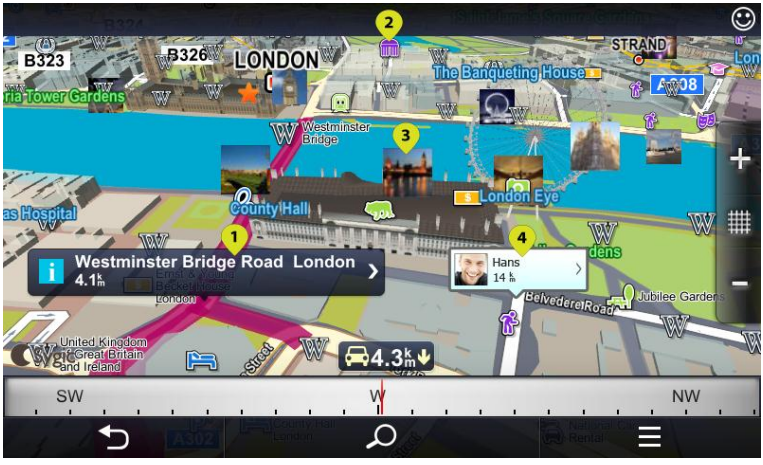
Please note, that symbol (((•))) specify functionality available for devices with internet connection.

Switch to the map browsing mode by dragging the map with your fingers. You can explore other locations and choose any available action directly on the enhanced interactive map while browsing (e.g. select your destination, share location, add POI, etc.).

By tapping on the interactive map, you can directly highlight following objects:

1. Street/Road - highlighted street or road will switch color to magenta and information bubble will appear above. By tapping on the info bubble, you can choose desired action from the Action menu

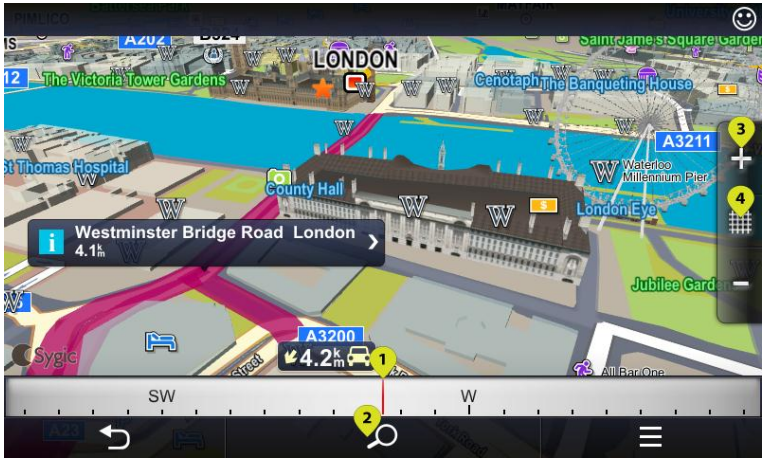
2. POI – choose any POI directly on the map and select what to do next
3. Panoramio photo – you can choose any Panoramio photo by tapping on it directly on the map
4. Friend - You can tap on friend's avatar directly on the map and choose next action from Action menu



After tapping on interactive objects on map, information bubble will appear above. When you tap information bubble, you can select desired action from Action menu.

Note: The action menu appears only if you zoom into a part of map that is included in your product license.

In a map browsing mode you can use also following features:



1. Compass

Use compass at the bottom of the screen to turn around and change direction of the view. Tap on the compass to return the map to the north-up position.

2. Quick Search

Tap the Search icon in the middle of your map browsing bar and type the name of the object you want to search – searches amongst streets, cities, POIs, Google local search...

3. Zoom

If you are in a map browsing mode, tap (+) button to zoom-in to more detailed view, tap (-) button to zoom out. Alternatively you can zoom using multi-touch gestures (pinch to zoom) on certain devices.

4. 2D/3D view

Switch between 2D and 3D view by taping on the grid between the + and – symbols on the right side of the map browsing screen.

Navigation Mode - Turn by Turn Navigation

The Navigation Screen will show the map of your surrounding area with the calculated route highlighted in purple.

As you approach a junction, further directions are displayed to indicate which road to take.

In addition to turn by turn directions, the Navigation Screen also provides a range of further useful information:

1. Next maneuver
2. Distance to the next change of direction
3. Current Speed
4. Estimated time of arrival at the destination
5. Distance to the destination
6. Dynamic Lane Guidance
7. Current Speed Limit
8. Upcoming Change of Speed Limit Notification
9. Real-Time Traffic – single incident
10. Real-Time Traffic – all incidents on route icon
11. Current Road/Street
12. Next Road /Street to take
13. Speed Camera Warning
14. Current location indicator
15. Traffic flow information
16. Map zoom in/out
17. Switch between 2D and 3D view
18. Quick Search
19. Route Progress Bar
20. POI (Point of Interest)
21. POI on route
22. Turn after next turn indicator

Quick Menu

In navigation mode, tap the middle of the information bar to enter the Quick Menu.

In the Quick Menu, you can choose to:

1. Navigate to the parking close to your current location
2. Cancel the route
3. Navigate to the nearest petrol station
4. Navigate Home
5. Mute all sounds from application
6. Volume control
7. Report Police Trap
8. Report Traffic Incident/Dangerous Place on Route

II. Planning the Route

In order to reduce distractions and to ensure your own safety, always plan your route before you start driving.

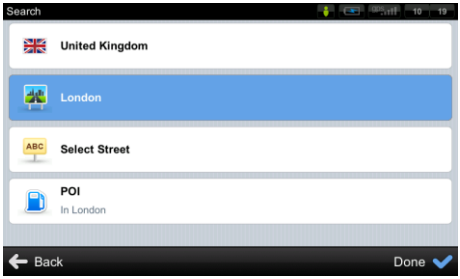
Entering an Address

To set your destination by entering its address select:

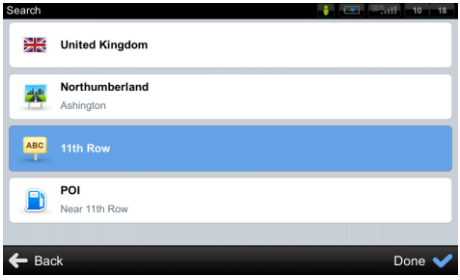
Menu > **Navigate to…** > **Address** or POI

Then you can choose from options Select City or Postal Code or Select Street directly. Enter the first few letters of the City/Street name to see a list of similar names.

Sygic supports City-first and Street-first address entry.



City-first address search



Street-first address search
Select street first and city changes automatically

Then you can enter exact house number or select from additional options as listed bellow.

The list also features explanatory icons left to the city/street name:

City

Capital city

City center

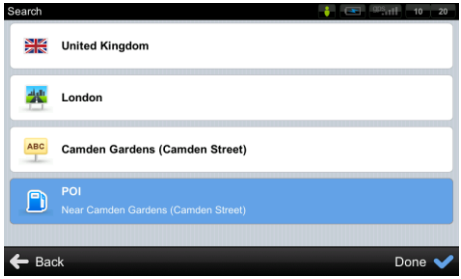
Street

Street crossing

Middle of street

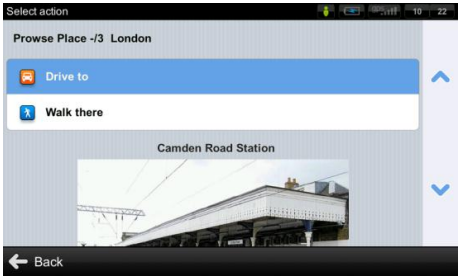
Select the desired city/street from the list.

Tap on POI to see a list of all points of interest near selected address.



Tap Done button and Action Menu with following options will appear: Drive to, Walk there, Travel via, Show on map, Nearby POI, Add to favourites, Share location.

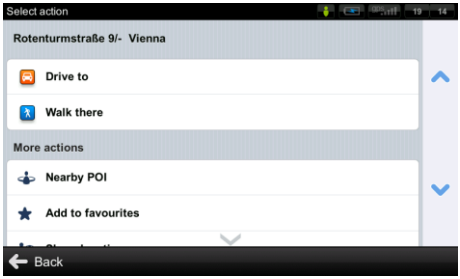
For more information about Action Menu, see the chapter Action Menu.



To select a different address altogether, tap the Back button.

Another possibility to select desired destination is to tap the street at exact place you want to navigate to directly on the map in a Map Browsing Mode. An information bubble will appear above the highlighted street.

Tap on the informaton bubble and select desired action from Action Menu.



If your device can determine your current position, your route will be calculated immediately from that position.

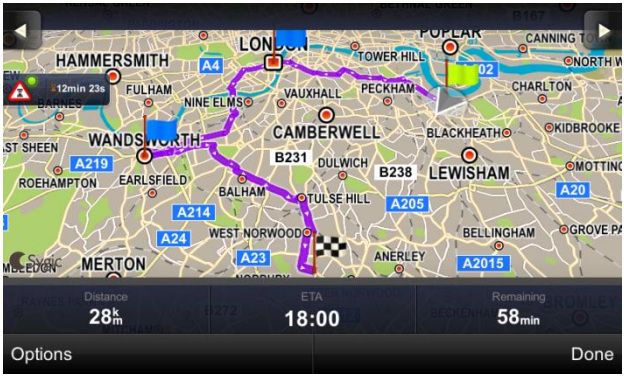
If your current position cannot be determined, you will be offered the following options:

Wait for valid position **(Recommended)**
Your route will be calculated from your current position as soon as a valid GPS signal is available (see the chapter Acquiring GPS Signal).

Last valid position
Your route will be calculated from your last known position (i.e. where you were just before the device lost GPS signal).

Select from map
Allows you to select any starting point for the route calculation.

When route calculation is complete, the entire route is displayed on map.



Tap on Options to access route summary. From route summary you can:

	Cancel route
	Access Route options
	Access POI on route

	Avoid toll roads, Avoid motorways, Avoid ferries; Avoid special area, Avoid unpaved roads, Avoid restricted area,
	Manage Traffic incidents on route (Availability of the traffic service depends on your product configuration and traffic providers.)
	See list of Important places
	Show all instructions
	Change start point
	Show on map
	Travel via
	Optimize route
	Weather forecast
	Save route

To accept the route and start turn by turn navigation, tap Done. If you wish to return to planned route go to Menu > Route.

Action menu

Action menu is the last step in the process of selecting any location in Sygic. A variation of Action menu is available after:

- Selecting an interactive object (POIs, streets/roads, friends on map, Panoramio photos) directly on the map in a Map Browsing Mode and tapping the information bubble above selected object
- Making a selection from any part of Navigate to… menu
- Selecting a Friend from My community > Friends

Drive to
Set selected location as destination and calculate route for car navigation.

Walk there
Set selected location as destination, switches to walking mode and calculate pedestrian route.

Travel via
Insert a waypoint to an existing route.

More actions

Nearby POI
Searches POIs near selected location or last valid position.

Show on map
Not available from Map Browsing Mode.

Add to favourites
Add selected location to the list of favorite destinations.

Share location
Send a message with position via e-mail or Facebook.

Add POI
Add selected location to the database of points of interest.

Actions related to Friends

Send Message
Send message via Friend network.

Remove this friend
Selected friend will not be notified about his/her removal.

Assign new position
Set GPS position linked to your contact/friend.

Profile
View the friend's profile from network.

Acquiring GPS Position

If there is no GPS signal, the GPS signal indicator on the left side of the screen will show empty bars. This can happen under any of the following conditions:

- The device is in a tunnel or at a location where signals from the GPS satellites are obstructed by buildings, trees, electric cables or other objects.

- Device system settings or Product Settings are set incorrectly.

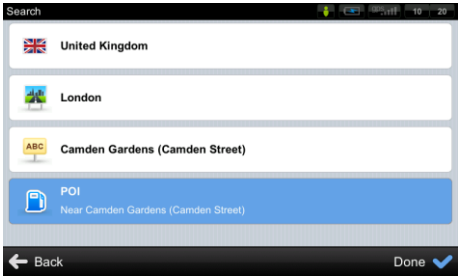
You can check and configure GPS settings in:
Menu > Settings > Hardware, and
Menu > Settings > Battery management

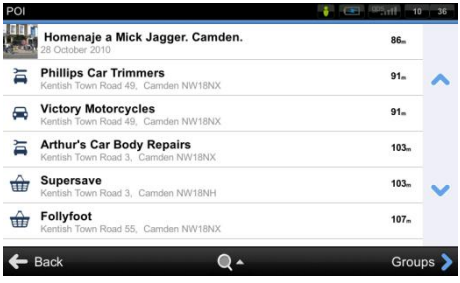
Navigating to a Point of Interest

In addition to the road network, the map also stores the details of thousands of Points of Interest (POIs) such as gas stations, restaurants, hotels, tourist attractions and other facilities.

To set POI as your destination, you have multiple options:

- Menu > Navigate to… > Address or POI will find POI near the selected address.
- Menu > Navigate to > Nearby POI shows a list of POIs near your current (or last valid) position.
- Select a position in Map Browsing Mode and choose Nearby POI from Action Menu
- In a Map Browsing Mode tap directly on POI you want to select and choose desired action from Action Menu.





Searching POI by Name

Anytime during the search process, you can start typing the name of POI (tap the search icon to show the keyboard) to refine the results.

Searching POI by Categories

You can switch between List view (shows narrow list of POIs) and Groups view (shows POI categories and subcategories). To refine your search results, tap the search icon at the bottom of the screen and type the name of the POI you are looking for. You can also enter partial names.
When finished, the Action Menu pops up. For more information, see the chapter Action menu.

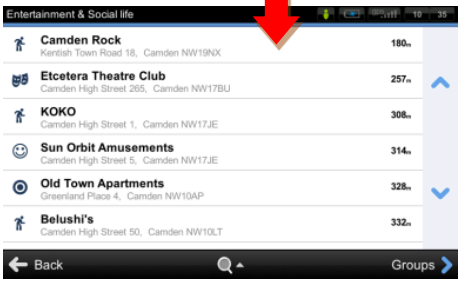
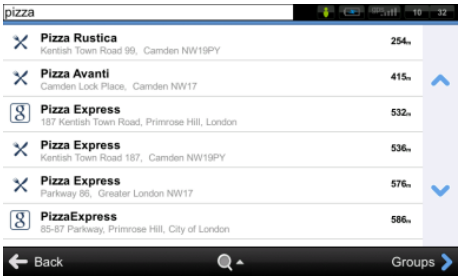
List

POI groups



POI list



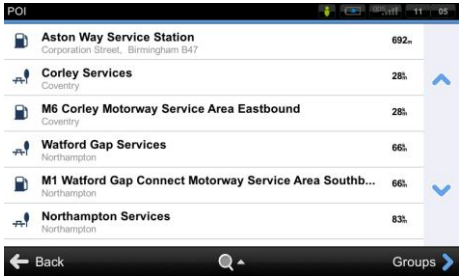
Search POI by name

Navigating to POIs on route

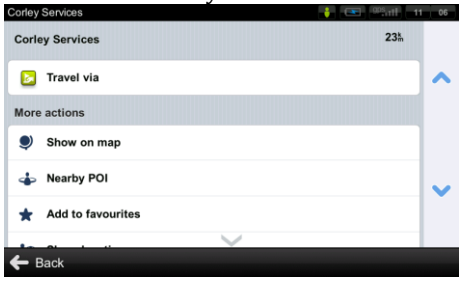
POI on route lets you know, how far available POIs on your route are from your current location. When you have your route calculated, or anytime during navigation, you can access available POI on route by tapping on the map in the Navigation Mode. Side Menu with available POIs on route will appear on the left side of the navigation screen.

Anytime during the navigation you can tap on the map to unhide the side menu with available POIs on route.

Tap on the POI on route available in the side menu and list of POIs on your route, listed by proximity to your current location, will appear.

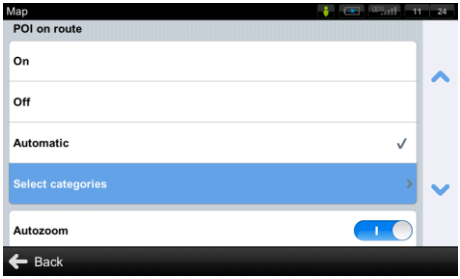


Select a POI which you would like to add to your already calculated route as a waypoint. From the Action Menu choose the Travel via option. A waypoint has been added to your route.



POIs like petrol stations and rest areas are set as POIs on route by default. You can set your own POIs on route and choose from any POI category in:

Menu > Settings > Map > POI on route > Select categories



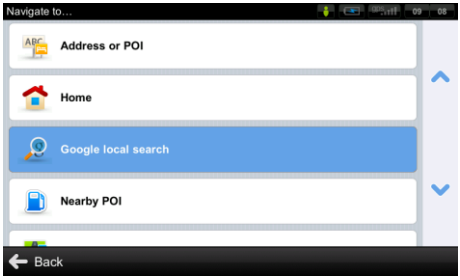
Here you can also disable this feature.

Navigating by Google Local Search

Google Local Search will determine your position or your last valid position and find POIs according to your entered key words near this location or if you don't enter any keywords, list all POIs prioritised by proximity related to your location.

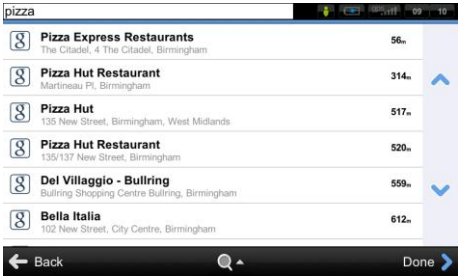
To set POI from Google Local Search as your destination go to:

Menu > Navigate to...> Google local search



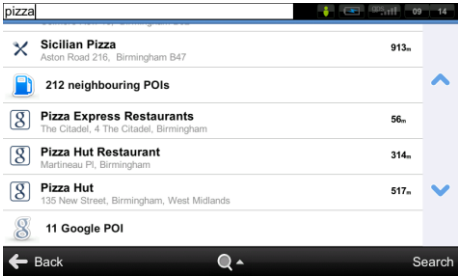
If you don't enter any key words into the search bar, Google local search will provide a list of all POIs prioritised by proximity related to your location.

To enhance your search results and make your POI search easier and more effective, enter the key words that describe POI you are searching for. Google local search will list results prioritised by proximity related to your location.



Select the POI from search results and choose desired action from Action Menu.

You can also enter the key word into the Quick Search and Google local search results will be grouped under category marked with a Google icon.

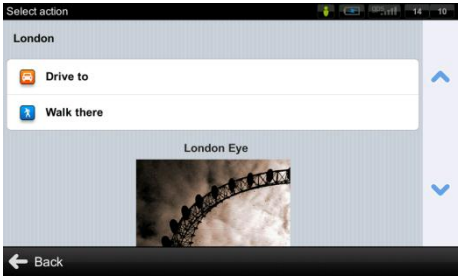


Navigating to Photo

You can also navigate to any Panoramio photo displayed on the map. This way you don't need to enter the exact address, or street name.

In a map browsing mode tap on the Panoramio photo of your interest directly on the map. Enlarged window with the selected photo will appear.

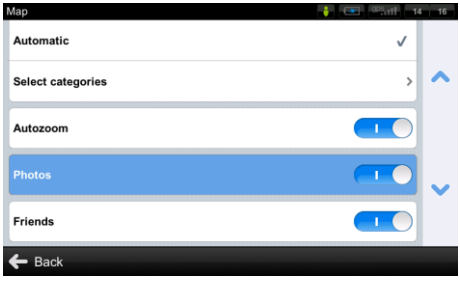
After you tap on the photo, Action Menu will pop up and you can choose what to do next.



Panoramio photos are turned off by default.

In order to see the Panoramio photos on the map, you must change this setting in the Settings menu:

Settings > Map > Photos



Turn the Photos button on.

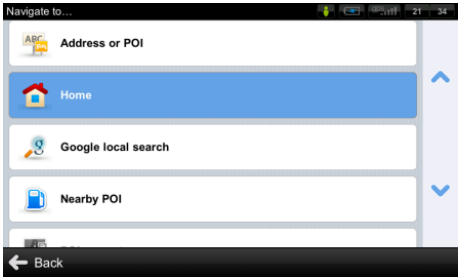
Panoramio photos are connected feature, so they can be viewed only in the online mode.

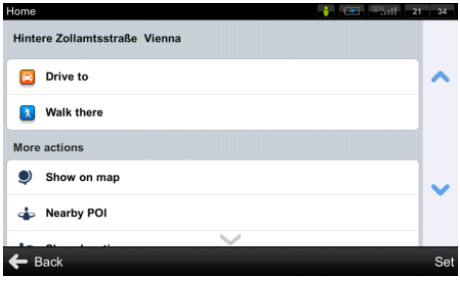
Navigating Home

To start using this feature, you need to set your home location first, select:

Menu > Navigate to... > Home

Once your home address is stored, you can navigate home from the same dialogue.





If you wish to change your Home address, tap the Set button.

Navigating to Recent Destinations

Sygic keeps track of your recent destinations, making it easy to return to a previously set location.

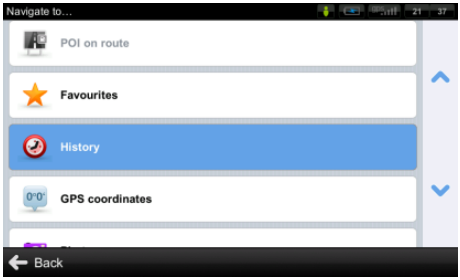
When entering an address through:

Menu > Navigate to...> ,Address or POI

the last entered address is preselected. If you are selecting City or Street, the list of previous selections appears. They are marked with icon

You can directly go to a list of recent destinations by selecting:

Menu >Navigate to...> History



and start navigation by selecting a previous destination from the list shown.

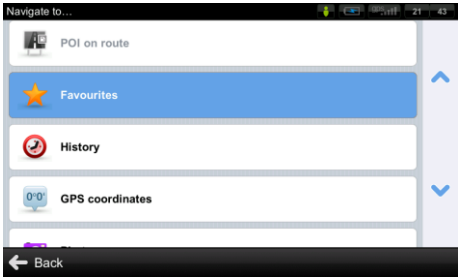
Tap on the item and select action.

Navigating to Favourite Destinations

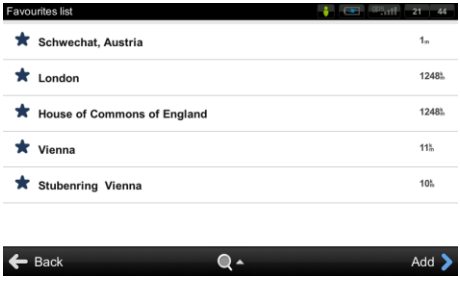
To view a list of your favourite destinations, select:

Menu > Navigate to...> Favourites

You can start navigation by selecting a Favourite destination from the list shown.



Select the desired Favourite destination by tapping it and then select your next option from the Action Menu.



Defining a new Favourite destination

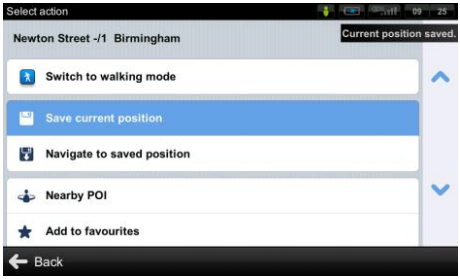
To add a new item to the list of your Favourite destinations, tap on Add, then set address by choosing from following options:

- My current position,
- Select from map, or
- Enter address.

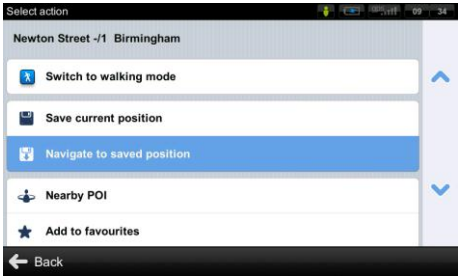
Save your current position

You can save your current position and get back to it later.

To save your current position, you must tap on the current position indicator (arrow that represents your vehicle) and choose an action Save current position from the Action Menu.



You can later get back to this saved position by tapping on the current position indicator again and tap on Navigate to saved position button.



Action Menu will appear and you can choose your next action.

This way you can also browse among nearby POIs, add this location to favourites, share location or add POI.

III. Altering the Route

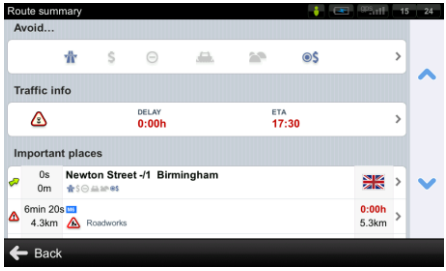
Route Summary

You can access detailed information about the calculated route from the Route menu.
Select Menu > Route:

Cancel route

Access Route options

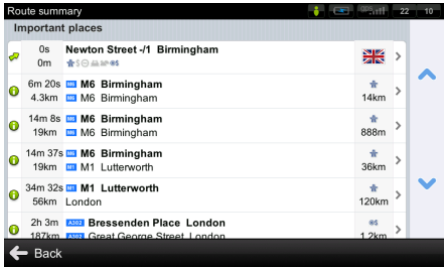
Access POI on route



Avoid toll roads, Avoid motorways, Avoid ferries; Avoid special area, Avoid unpaved roads, Avoid restricted area,

Manage Traffic incidents on route

(Availability of the traffic service depends on your product configuration.)



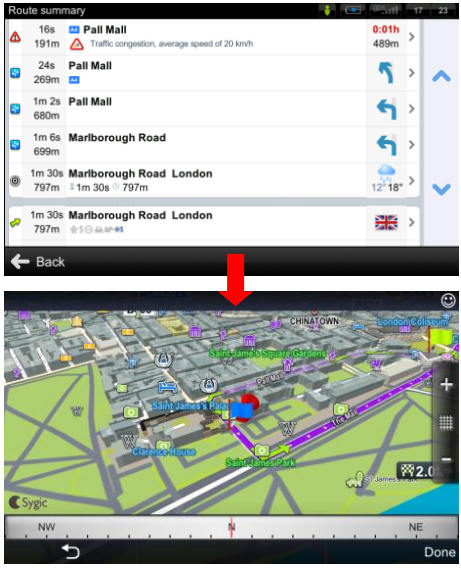
See list of Important places like waypoints, crossings and cities near the route.

Show all instructions

In the section Important places you can see a list of important junctions and places along the route.

To get a detailed list of all junctions and directions along the route, select Show all instructions.

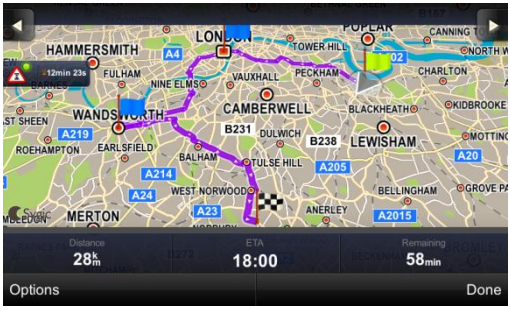
Tap on selected item on the list to view the junction on the map.



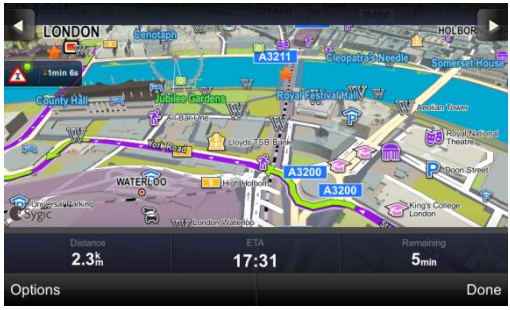
Route options

In Route options, you can perforom various actions and changes concerning your calculated route.

To see the entire route on the map, select Route options > Show on map. The whole calculated route, highlited in purple will be displayed, with additional information, as a distance to your destination, estimated time of arrival, time remaining to the destination.



You can also check the entire calculated route instruction by instruction, by tapping on the little white arrows on the top left and right corners of the screen, before you tap on the Done button, during the route calculation.



To see how far and in which direction is your destination point or a start point from your current location or from any point you tap on map, zoom in for more detailed view and you will see distance markers icons of your start point 1.4km and destination point 201km somewhere on the screen.

This means, that if you tap any location on your route, application will caluclate the distance from your start point and end point according to your selected location, as well as point out a direction of start/end point.

You can also quickly switch between start and end point of your route by clicking on these distance markers.

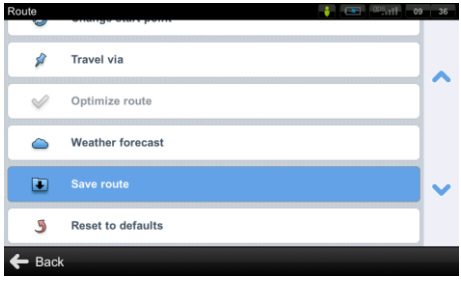
Distance markers:

1. Start point
2. End point/destination

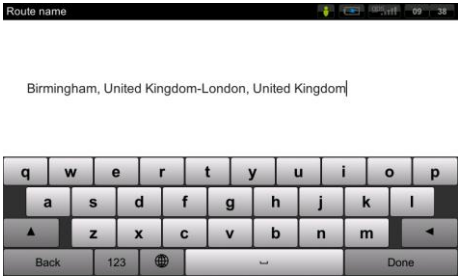
To see detailed weather forecast for seven days, select Route options > Weather forecast.

To see the calculated route as if you were driving along (fly over mode), select Route options >Demonstrate.

To save the route, select:
Menu > Route options > Save route.



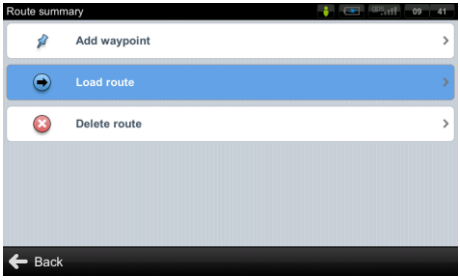
Application will suggest a name for this saved route. You can modify this according to your preferences and store it on your device.



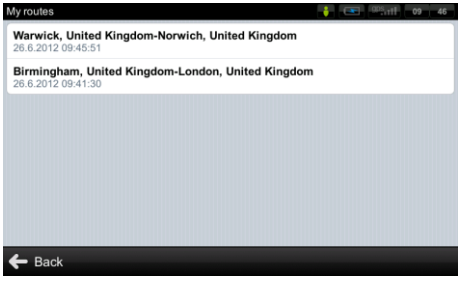
To load any of your saved routes, you need to cancel any calculated route in the application.

To cancel any calculated route, go to:
Menu > Route > Cancel route

To load any of your saved route, go to:
Menu > Route > Load route



And tap on the route of your choice

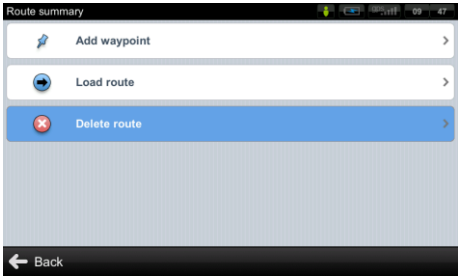


Tap the Done button and previously saved route will load.

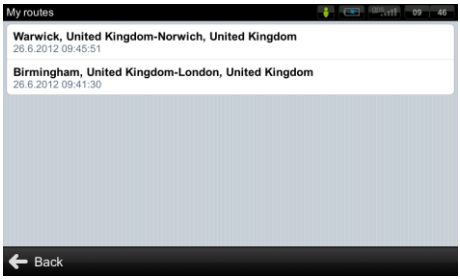
If you won't need any of the saved routes any more, you can choose to delete that particular route from your saved routes.
In order to delete a previously saved route, you need to cancel any calculated route beforehand.

Go to:
Menu > Route > Cancel route

Then go to:
Menu > Route > Delete route



Tap on the particular route you want to delete and confirm deletion.



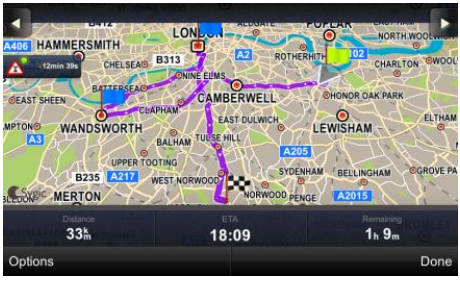
Modifying the Route

If you wish to travel through a certain place on your trip, choose from following options:

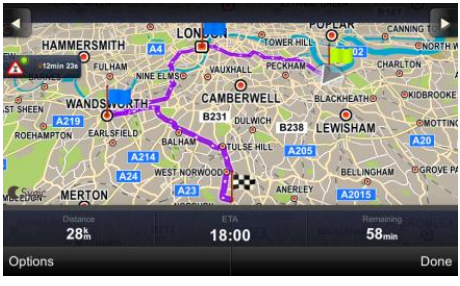
- Travel via in Action Menu. (For more information, see the chapter Action Menu.)
- tap on Add waypoint in Route summary and set address by choosing from following options:
  - My current position,
  - Select from map,
  - or Enter address

To optimize a route with multiple waypoints, select Optimize route.

This option is only available if the route planned contains more than two waypoints.



Route before optimization

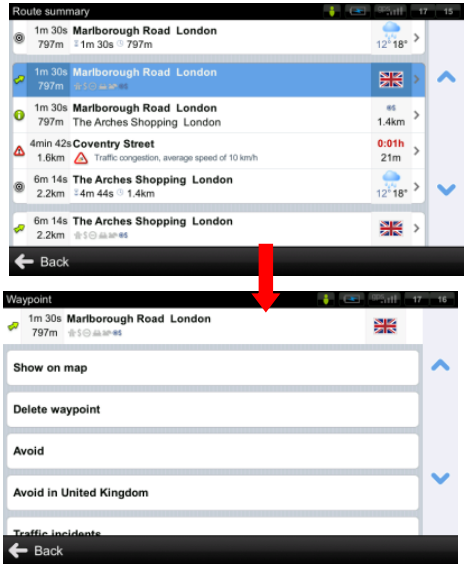


Optimized route

You can modify those parts of the route that are listed as Important places.

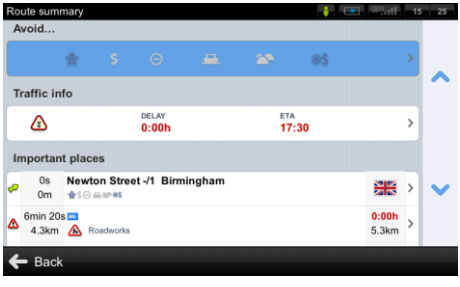
Tap on selected item and a variation of following menu will appear:

	Show on map
	Delete waypoint
	Avoid Avoid parts of the route with special attributes like toll roads, highways, ferries, special areas, unpaved roads or restricted areas.
	Manage Traffic incidents
	Change waypoint
	Move waypoint up
	Move waypoint down
	Change start point (This option is available only when the selected item is the start point.)
	Change end point (This option is available only when the selected item is the end point.)
	Find nearby parking (This option is available only when the selected item is the end point.)
	Weather forecast (This option is available only when the selected item is the end point.)

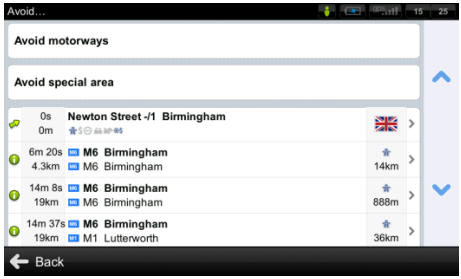


Avoid toll roads, highways or ferries

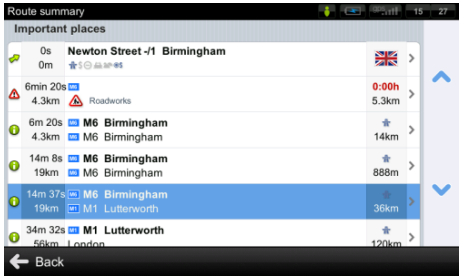
To Avoid toll roads, Avoid motorways, Avoid ferries, Avoid special area, Avoid unpaved roads, or Avoid restricted area, tap on the icons shown in the route summary.

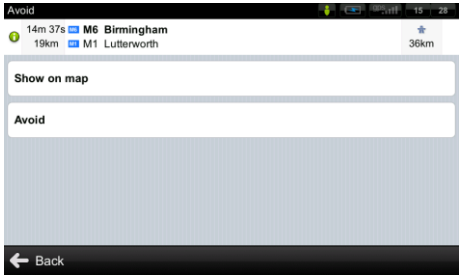


Situations that change preferences of the route calculation, such as toll roads, ferries, restricted area etc. and can be avoided, will be listed amongst avoid items.



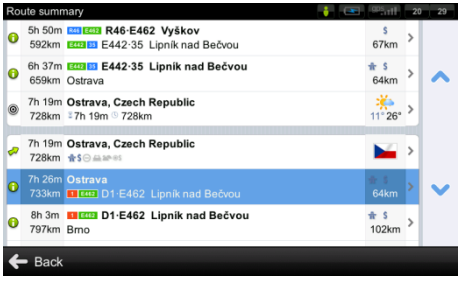
E.g. you can either avoid all toll roads on the route, or just for selected area.

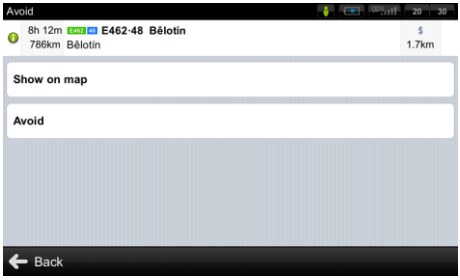




Your route will get recalculated and this particular section will be avoided.

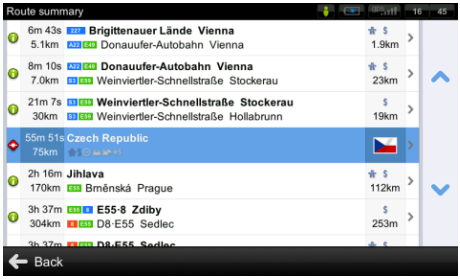
If you have added some waypoints to your route, you can avoid these sections for each waypoint separately.



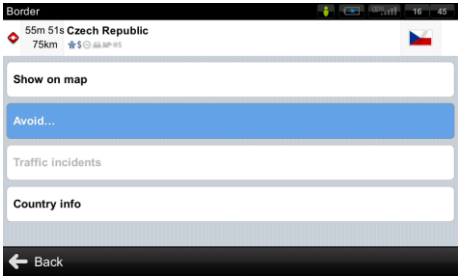


If your route is passing through several countries, you can also apply any of the avoid options (avoid toll roads, highways, ferries, special area, unpaved roads, restricted area or avoid the whole country) for each country separately. E.g. you can avoid all toll roads for the selected country.

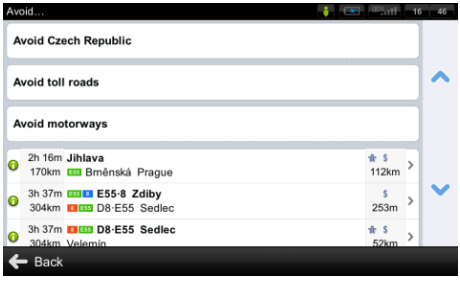
Go to the route summary, tap the avoid options and you can choose which country specific avoid points you want to avoid.



Tap on the flag of the country and specify which avoid options to apply (e.g. toll roads).



You can also avoid navigating through the whole country, unless it's a country of your destination or start point. In such situation you can only avoid certain avoid points, if available.



If you wish to cancel the calculated route entirely, and use the navigation system only as an indicator of your current position, select:

Menu > Route > Cancel route

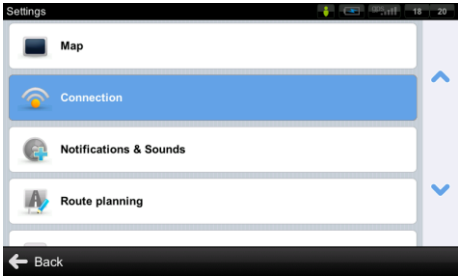
IV. Online features

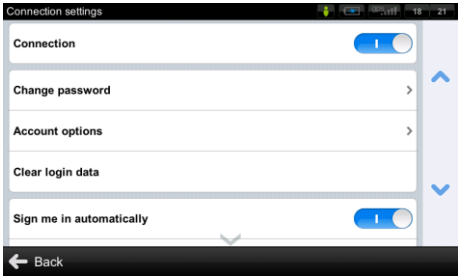
The entire chapter Online features applies only to devices with internet connectivity.

Connection

In order to use online services (e.g. Real-Time Traffic and safety camera alerts) you will need to connect your device to the internet. Select:

Menu > Settings > Connection





Enable Connection to go online. To connect automatically, enable option Sign me in automatically.

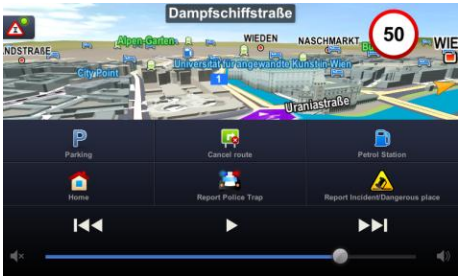
Reporting speed cameras and incidents

If you observe a speed camera or traffic incident on route, tap the bottom bar of the Navigation Screen.

Quick Menu will appear.

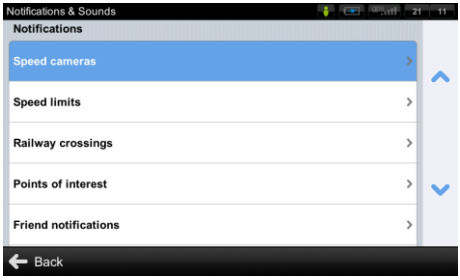
Report the Police Trap by tapping on the Police Trap icon. Reported Police Trap will appear on the map instantly and can be viewed by other users.

To report an incident or a dangerous place, tap on the incident icon. Reported incident/dangerous place will appear instantly.



To change the way you receive reported camera and incident information, select:

Menu > Settings >Notifications & Sounds> Speed cameras



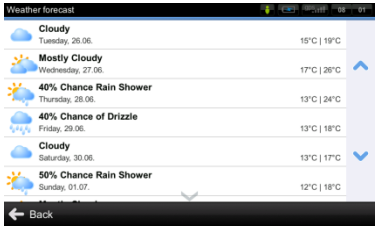
Join the growing Policetraps.com community, where other users meet to make further improvements to the database.

For more information, visit www.policetraps.com

Weather Information

To check the weather information, select:

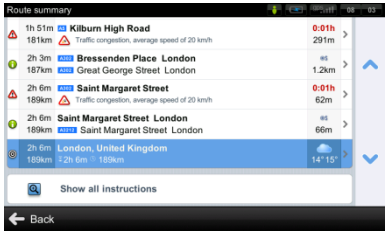
Menu > Route > Route options > Weather forecast



Other way to check the weather at your destination is to go to:

Menu > Route

Your destination is listed amongst important places as a last one and contains the weather information at your destination.



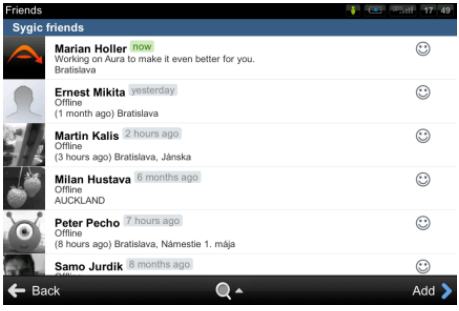
To switch between °C/°F, select:

Menu > Settings > Regional

V. Community

> The entire chapter Community applies only to devices with internet connectivity.

Friends



To add friends go to:

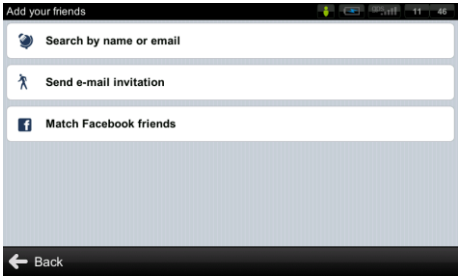
Menu > My community > Friends

Tap on Add.

To search for your friends among the growing Sygic community tap on Search by name or email and enter the name. The list of possible results will appear. Tap on chosen name and tap on Add to compose an invitation message.

Tap on Send e-mail invitation to invite your friend by email.

To add your Facebook friends tap on Match Facebook friends.



When you receive a friend request it will be displayed in:

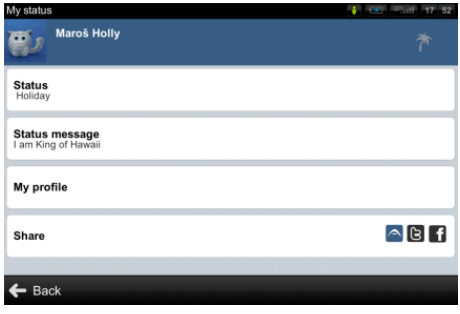
Menu > My community > Events

Tap on event to accept or deny the request.

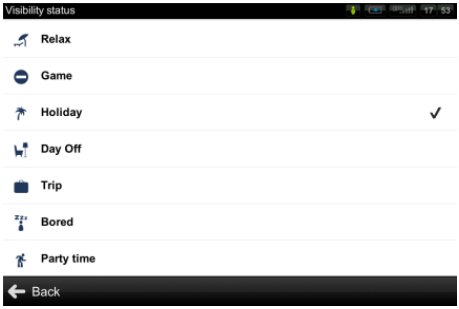
Share your status

To set your status and share it with friends go to

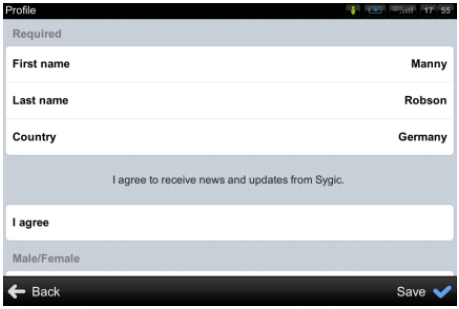
Menu > My community > My status



Tap on Status and choose one of the options. Tap on Status message to share your mood with other friends.



To edit or add details into your profile tap on My profile.



Send messages

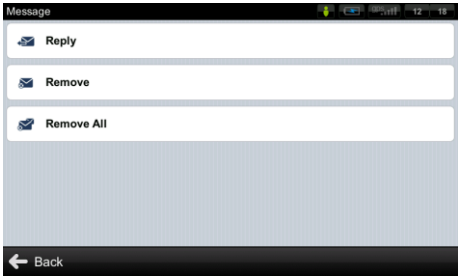
To send, view and delete messages go to

Menu > My community > Messages

The screen will show the most recent messages grouped by sender. To view all messages from certain person tap on the name of the sender.

To send a message to your friend, tap on Compose, choose a name of a receiver from your friends list and tap on Done button. On the following screen click on Messages, write your message and tap on Done button. Click on Send to send your message.

You can choose to Reply to a message or Remove message by taping on it. To delete all messages from this sender tap on Remove All.



Quick Share

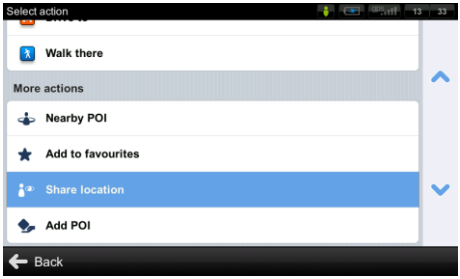
Sygic enables you to share your current position or any other location with others via Quick share.

To send your current position to your friends, go to:

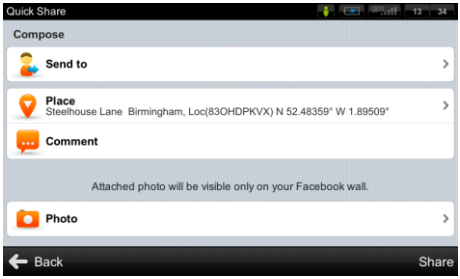
Menu > My community > Quick Share

To send any other position, choose location the same way, as setting the destination in chapter Planning the Route or select a point on map directly by tapping a desired location in a map browsing mode.

From the Action Menu choose Share location.



Enter the necessary information and tap on Share button.



IV. RDS-TMC Traffic alerts

The entire chapter Traffic alerts applies only to PNDs with the RDS-TMC hardware support. Availability of the RDS-TMC Traffic is country specific and depends on providers.

RDS – TMC Traffic alerts

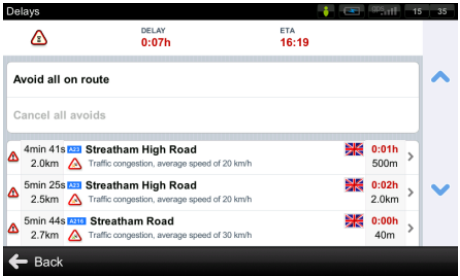
To view real time alerts of traffic incidents along your calculated route, tap directly on the Traffic info notification icon up in the left corner, after your route has been calculated or anytime during the navigation, or select:

Menu > Route > Traffic info

The screen will list the incidents ordered by their distance from your current position.

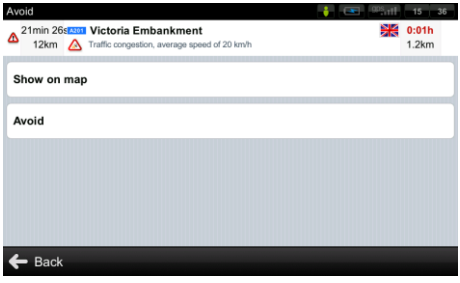
You can select which of them you want to avoid.

To select and avoid all listed incidents, tap the Avoid all button.



To select one particular incident, first tap the incident on the list.

To show its extent on the map tap on Show on map, to avoid it tap Avoid.



Traffic info is displayed also on the Route Progress Bar.

Route Progress is normally violet, but if there is a traffic incident on route or changed traffic flow, it will change color to green, yellow or red, depending on the impact of a traffic incident or congestion.

- Green traffic notification –indicates, that areas with usual traffic delays and congestions are at the moment without delays or with just insignificant delays

- Yellow traffic notification – small to medium delays

- Red traffic notification – heavy congestions, bigger delays

- Hatched red and black traffic notification – permanently closed roads

Acquiring TMC RDS messages

If there is a hardware support for the reception of RDS TMC messages, the navigation software will automatically search for a TMC transmitting station using the hardware tuner in order to receive the traffic messages (TMC messages).

When the TMC messages are received, they are automatically showed on a map and in the traffic dialogs (see the Chapter Real-Time Traffic and TMC RDS Traffic alerts):

Menu > Info > Traffic
Menu > Route > Traffic info

You can check the status of your TMC reception in:

Menu > Settings > Hardware – the section TMC hardware
Menu > Settings > Hardware > Tuner

Having the Automatic Search set on a receiving station is tuned automatically.
Having the Automatic Search set off it is possible to set the fixed radio frequency by means of the Tuner menu.

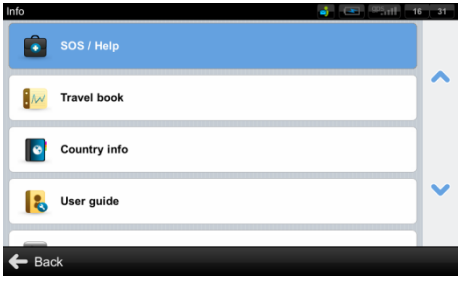
You can set preferred Baud rate and COM Port in:
Menu > Settings > Hardware > TMC hardware

VI. Additional Information

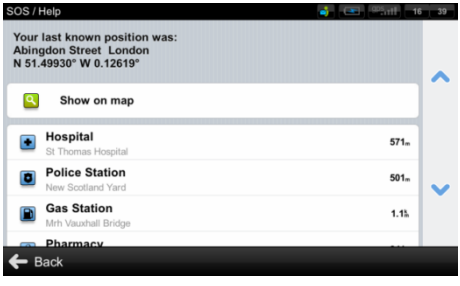
SOS/Help

In a case of an emergency use the SOS / Help button, to indicate your precise location, or last known position if you don't have a valid GPS signal.

Menu > Info > SOS / Help



You can view this position on a map or view a list of institutions which you may need in a case of an emergency.

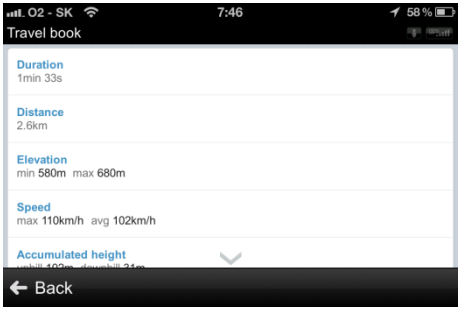


Travel book

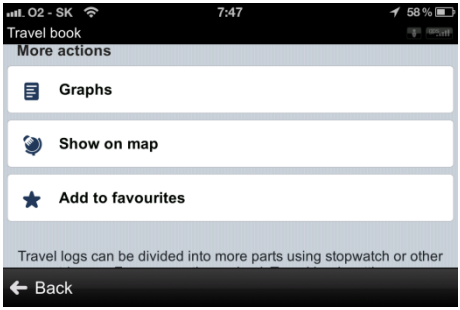
To see traveled routes statistics and altitude profiles, go to

Menu > Info > Travel book

Tap on selected log to see overall statistics



Scroll down for more actions.



Tap on Graphs and drag the blue marker to see logs marking altitude, distance, time, speed and acceleration.

To see the log on map tap on Show on map. To add the log to favorites tap on Add to favourites.

VII. Settings

IMPORTANT: Menu items marked with * are not available in all devices.

To change factory settings, go to Menu > Settings.

Notifications & Sounds

Enable sounds or Disable sounds

Voice instructions – set if street names, road numbers, traffic notifications should be transformed into spoken text (TTS feature if available)

Volume settings* - set the sound intensity separately for low driving speed and for high speeds.

Advanced – Set the volume of voice instructions and notifications as a percentage of the music volume,

Set sounds for notifications
- Speed cameras
- Speed limits
- Railway crossings
- Points of interest
- Online friends
- Message notifications
- Traffic notifications

Map

Set Day /Night colours, or choose

automatic switching between them.

Map details

Choose which Points of interest should be visible on map

Buildings - you can set buildings to elevated mode or to footprint, or simply turn it off.

Landmarks – switch between the on/off mode

2D / 3D- change between 2D and 3D map view

Signpost info – turn on/off

Lane guidance – change between dynamic or simplified mode of lane guidance or simply turn off the lane guidance

POI on route – set witch POI categories should be visible on route or simply turn on/off this feature or set to automatic mode

Autozoom

Photos – turn on/off the displaying of Panoramio photos on of places on map.

Friends – turn on/off friends display on the map

Traffic info – turn on/off the traffic info notifications

Current street – turn off/on

Connection

Connect or Disconnect your device from internet

Change password

Create New Account

Account options

Clear login data

Sign me in automatically

Ask before connecting

Enable data roaming

Route planning

Avoid toll roads - Set the preference of paid road segments: avoid them, do not avoid them, or always ask.

Avoid unpaved roads - Set the preference of unpaved roads: avoid them, do not avoid them, or always ask.

Avoid motorways - Set the preference of motorways: avoid them, do not avoid them, or always ask.

Route computing - Set the routing algorithm to Fastest, Shortest, Economic.

Traffic incidents – Set this preference to

avoid incidents automatically.

Regional

Voice - language of voice instructions

Language - language of user interface.

Distance units – switch between kilometers, Miles/Feet, Miles/Yards

Time format – switch between various time formats

Temperature – switch between various temperature formats

GPS coordinates – switch between various GPS coordinates formats

Battery management

Set energy saving preferences for device On external power and On battery.

Hardware

Settings for advanced users only. Set the GPS communication port manually.

Set preferred Baud rate and COM Port for RDS – TMC Traffic in the TMC hardware section

Travel book

Set laps while in walking mode to be Stopwatch triggered, Distance triggered or on automatic Lap detection. For more information, see the chapter

Travel book.

Information bar

Choose which parameters should be visible on which place on Information bar in driving or walking mode (ETA, Remaining distance, Speed, Signal level)

Autoclose dialog

Dialogs will be hidden automatically after specified time.
